

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

the 1980s, the number of people in the world who are illiterate has increased from 400 million to 600 million.

There is a growing awareness that illiteracy is a major barrier to development. The United Nations Development Programme (UNDP) has estimated that illiterates in the Third World are 10% of the population, but that in some countries the proportion is as high as 50%.

The World Bank has estimated that illiterates in the Third World are 10% of the population, but that in some countries the proportion is as high as 50%.

PREFACE.

IN deference to the opinion of some good teachers, the editor of the New Practical Arithmetic has been disinclined, either to make, or authorize to be made, a Key to that work.

It appears, however, that there can hardly be a mathematical book of any considerable popularity without a Key in some form. Withholding such a help in this case from the teacher and private learner, has failed of the hoped-for result. It has given occasion for the manufacture of many manuscript keys, and their free use in the school-room.

It has, also, been found that many teachers desire ready access to omitted answers, and that not a few, who are in charge of many pupils, fail of time to examine in detail numerous arithmetical operations, without a hand-book of solutions.

In view of these facts, the preparation of this book, by a practical teacher, was sanctioned.

It gives omitted answers to exercises both in the New Elementary and New Practical Arithmetics. It furnishes operations to exercises in the latter book — not full solutions or entire analyses — so that, while it may be of aid to the teacher, it can hardly be of much avail to the pupil.

Any teacher who will promptly furnish his pupils with all needed assistance, and who has the moral power to enforce precepts, need not, it is believed, fear any surreptitious use of Keys in his school.

- (15.) The man can do $\frac{1}{15}$ in one day, the boy $\frac{1}{10}$ in one day,
 and $\frac{1}{15} + \frac{1}{10} = \frac{10}{150} + \frac{15}{150} = \frac{25}{150}$ what both can
 do in 1 day. It will then take as many days to do
 $\frac{150}{25}$, or the whole, as $\frac{25}{150}$ is found times in $\frac{150}{25} =$
 $6\frac{1}{2}$ days, Ans.

- (16.) $\frac{1}{10} + \frac{1}{15} = \frac{3}{30} + \frac{2}{30} = \frac{5}{30} = \frac{1}{6}$
 $\frac{6}{6} \div \frac{1}{6} = 6$ days, Ans.
- (17.) The first will fill $\frac{1}{10}$ of it in one hour, the second $\frac{1}{15}$,

 $\frac{1}{10} + \frac{1}{15} + \frac{1}{20} = \frac{24}{240} + \frac{16}{240} + \frac{12}{240} = \frac{52}{240}$; $\frac{240}{52} \div$

- (19.) $\frac{1}{2} + \frac{1}{3} = \frac{5}{6}$; $\frac{6}{6} - \frac{5}{6} = \frac{1}{6}$ remaining, therefore
 $\$400 = \frac{1}{6}$, and $\frac{6}{6}$, or the whole, = 6 times \$400, or
 $\$2400$
 $\$2400 - \$400 = \$2000$, Ans.
- (20.) $\frac{3}{8} + \frac{5}{12} = \frac{9}{24} + \frac{10}{24} = \frac{19}{24}$
 $\frac{24}{24} - \frac{19}{24} = \frac{5}{24}$, therefore, $75 = \frac{5}{24}$; $\frac{24}{5} = \frac{1}{5}$ of 75 = 15;
 $\frac{24}{5} = 24$ times 15 = 360, whole number of sheep.
 $\frac{3}{8}$ of 360 = 135 in 1st pasture.
 $\frac{5}{12}$ of 360 = 150 in 2d pasture.
- (21.) $\frac{2}{3} + \frac{7}{8} = \frac{16}{24} + \frac{21}{24} = \frac{37}{24}$
 $\frac{37}{24} - \frac{37}{24} = \frac{31}{24}$; therefore, $\$2000 = \frac{31}{24}$ of the cost of
 the mill, and $\frac{24}{31}$ of the cost = $\$2000 \div 31 =$
 $\$64\frac{16}{31}$; then $\frac{37}{31}$, or the whole cost, = 63 times
 $\$64\frac{16}{31} = \$4064\frac{16}{31}$; then $\frac{2}{3}$ of $\$4064\frac{16}{31} = \$903\frac{7}{31}$ is
 the sum A pays, and $\frac{7}{8}$ of $\$4064\frac{16}{31} = \$1161\frac{8}{31}$ is
 the sum B pays.
- (22.) If $\frac{3}{8}$ of the larger = $\frac{1}{2}$ the smaller,
 $\frac{1}{8}$ of the larger = $\frac{1}{4}$ of $\frac{1}{2}$ of the smaller = $\frac{1}{8}$, and $\frac{3}{8}$
 = 8 times $\frac{1}{8} = \frac{8}{8}$ of the smaller;
 since $\frac{3}{8}$ = the smaller, $\frac{3}{8} + \frac{3}{8} = \frac{16}{16} = \frac{1}{1}$ of the smaller;
 $\frac{1}{1}$ of 350 = 50; then $\frac{3}{8}$, or the whole of the smaller,
 $50 \times 3 = 150$; $350 - 150 = 200$ the larger;
 or, if $\frac{1}{8} = 50$, $\frac{4}{8}$, or the larger = 4 times 50 = 200,

A spends $\frac{1}{3}$ of \$200 = \$175;
B " \$200 + 5 = \$205.

- (24.) If they save \$400 in 4 years, in one year they will save \$100. Both incomes = \$800, and if they save \$100, they will both spend \$800 — \$100 = \$700; $700 - \$40 = \660 .

 $5 - 4.542 = .45+$ in.;
 Therefore, the first lady winds off .45 in.
 After the second has taken her share, $\frac{1}{2}$ will remain;
 Hence, as $1 : \frac{1}{2} :: 5^3 : 62.5$;
 $\sqrt[3]{62.5} = 3.968+$ in.;
 $4.542 - 3.968 = .57+$ in.;
 Therefore, the second winds off .57 in.
 After the third lady has taken her share, $\frac{1}{4}$ will remain;

 If the hills occupy simply a mathematical point, and
 be planted to the edge of the land, there may be
 53 rows with 53 hills in a row, or $53 \times 53 =$

2809 hills. But the points are supposed to be 2 ft. from the margin, leaving between the outside hills 204 ft. each way. This gives 51 spaces of 4 ft. each, and there will be 1 more hill than spaces, or $51 + 1 = 52$ hills; $52 \times 52 = 2704$, the number of hills, Ans.

- (17.) A can do $\frac{1}{3}$ of the work in a day; B can do the work in $\frac{1}{3}$ of 8 days, or $\frac{8}{3}$ of it in one day; C can do the work in $\frac{1}{3}$ of 12 days, or $\frac{12}{3}$ of it in one day; Hence, they can all do in one day $\frac{1}{3} + \frac{8}{3} + \frac{12}{3} = \frac{21}{3}$; Then, as $\frac{21}{3} : \frac{21}{3} :: 1 \text{ day} : \frac{3}{21}$ of a day = $21\frac{1}{3}$ hours, Ans.

 50 min. = 400 min. = 6 h. 40 min.
 The slow train must start as much before 2 as the

- (13.) Haven paid Smith \$900, one month before it was due, and the balance when due; so he is entitled to a credit on \$900 for 1 month, or to a credit on \$1 for 900 months.

Smith paid Haven \$500, 7 months before it was due, so that Smith is entitled to a credit of \$500 for 7 months, or to a credit of \$1 for 3500 months.
